Choosing the Right Acoustics Conference in the USA

With a multitude of acoustics conferences taking place annually in the USA, selecting the most

appropriate one requires careful consideration of your professional goals, research interests, and desired outcomes.

Aligning with Your Specific Acoustic Interests

The first step is to identify which branch of acoustics your work or interest falls into. Are you focused on architectural acoustics, noise control, physical acoustics, speech and hearing, musical acoustics, or perhaps underwater acoustics? Different conferences cater to these specialties. For instance, if your work is primarily on noise pollution and mitigation, an Inter-Noise conference might be more suitable than a conference heavily focused on bioacoustics.

Considering the Conference Scope and Audience

Evaluate the size and scope of the conference. Larger, broader conferences like the ASA meetings offer a wide range of topics and networking opportunities, while smaller, specialized workshops provide a more focused and in-depth experience. Consider the typical audience: is it predominantly academic, industry-focused, or a mix of both? The audience can influence the type of presentations and discussions you will encounter.

Evaluating Presentation and Publication Opportunities

If you plan to present your research, investigate the submission guidelines, deadlines, and the types of presentations accepted (oral, poster, etc.). Some conferences also offer opportunities for extended abstracts or full paper publications in proceedings or associated journals. These publication opportunities can be very beneficial for academic researchers.
