Frequently Asked Questions

What is the main difference between a prokaryotic

cell and a eukaryotic cell in Campbell Biology 9th edition?

The main difference is that eukaryotic cells have a true nucleus, whereas prokaryotic cells do not have a true nucleus.

How does photosynthesis occur in plants according to Campbell Biology 9th edition?

Photosynthesis occurs in plants when light energy from the sun is absorbed by pigments such as chlorophyll and converted into chemical energy in the form of glucose.

What is the concept of natural selection as explained in Campbell Biology 9th edition?

Natural selection is the process by which populations of living organisms adapt and evolve over time in response to environmental pressures, leading to the survival and reproduction of individuals with favorable traits.

What are the stages of mitosis in eukaryotic cells as described in Campbell Biology 9th edition?

The stages of mitosis are prophase, metaphase, anaphase, telophase, and cytokinesis.

What is the function of the plasma membrane in a cell according to Campbell Biology 9th edition?

The plasma membrane, also known as the cell membrane, is a thin layer of lipid and protein molecules that surrounds the cell and regulates the movement of materials in and out of the cell.

What is the difference between a haploid cell and a diploid cell in Campbell Biology 9th edition?

A haploid cell has one set of chromosomes, while a diploid cell has two sets of chromosomes.

How does the process of meiosis occur in reproductive cells according to Campbell Biology 9th edition?

Meiosis is a type of cell division that occurs in reproductive cells, resulting in four non-identical daughter cells, each with half the number of chromosomes as the parent cell.

What is the role of DNA replication in the transmission of genetic information from one generation to the next as explained in Campbell Biology 9th edition?

DNA replication is the process by which a cell makes an exact copy of its DNA before cell division, ensuring that the new cell receives a complete and accurate set of genetic instructions.
