

COLLEGE ALGEBRA EXPLAINED FOR MATH SUCCESS

THE FOUNDATION OF ADVANCED MATHEMATICS IS BUILT UPON A SOLID UNDERSTANDING OF COLLEGE ALGEBRA. **COLLEGE ALGEBRA EXPLAINED FOR MATH SUCCESS** IS CRUCIAL FOR ANYONE PURSUING FIELDS LIKE ENGINEERING, COMPUTER SCIENCE, ECONOMICS, AND EVEN MANY BRANCHES OF BIOLOGY AND SOCIAL SCIENCES. THIS COMPREHENSIVE GUIDE AIMS TO DEMYSTIFY THE CORE CONCEPTS OF COLLEGE ALGEBRA, PROVIDING CLEAR EXPLANATIONS AND PRACTICAL INSIGHTS TO HELP STUDENTS NOT ONLY GRASP THE MATERIAL BUT EXCEL IN THEIR MATHEMATICAL JOURNEY. WE WILL EXPLORE ESSENTIAL TOPICS RANGING FROM FUNDAMENTAL ALGEBRAIC MANIPULATION AND EQUATION SOLVING TO FUNCTIONS, GRAPHING, AND MORE COMPLEX ALGEBRAIC STRUCTURES. BY BREAKING DOWN THESE ELEMENTS INTO DIGESTIBLE PARTS, THIS ARTICLE WILL EQUIP YOU WITH THE KNOWLEDGE AND CONFIDENCE NEEDED TO TACKLE COLLEGE ALGEBRA WITH ASSURED SUCCESS.

UNDERSTANDING THE BUILDING BLOCKS OF COLLEGE ALGEBRA

COLLEGE ALGEBRA SERVES AS A VITAL BRIDGE BETWEEN INTRODUCTORY MATHEMATICS AND THE MORE ADVANCED CALCULUS AND LINEAR ALGEBRA COURSES. AT ITS HEART, IT'S ABOUT UNDERSTANDING RELATIONSHIPS BETWEEN QUANTITIES AND REPRESENTING THEM USING VARIABLES AND MATHEMATICAL EXPRESSIONS. THIS INVOLVES A DEEP DIVE INTO ALGEBRAIC EXPRESSIONS, WHICH ARE COMBINATIONS OF NUMBERS, VARIABLES, AND MATHEMATICAL OPERATIONS. PROFICIENCY IN SIMPLIFYING THESE EXPRESSIONS THROUGH THE APPLICATION OF ORDER OF OPERATIONS, DISTRIBUTIVE PROPERTY, AND COMBINING LIKE TERMS IS PARAMOUNT. MASTERING THESE FOUNDATIONAL SKILLS ENSURES THAT STUDENTS CAN CONFIDENTLY MANIPULATE MORE COMPLEX MATHEMATICAL STATEMENTS ENCOUNTERED LATER.

VARIABLES AND EXPRESSIONS: THE LANGUAGE OF ALGEBRA

VARIABLES, OFTEN REPRESENTED BY LETTERS LIKE x , y , OR z , ARE PLACEHOLDERS FOR UNKNOWN OR CHANGING VALUES. ALGEBRAIC EXPRESSIONS USE THESE VARIABLES, ALONG WITH CONSTANTS AND OPERATIONS LIKE ADDITION, SUBTRACTION, MULTIPLICATION, AND DIVISION, TO REPRESENT MATHEMATICAL RELATIONSHIPS. FOR EXAMPLE, THE EXPRESSION $2x + 5$ REPRESENTS A VALUE THAT IS TWICE SOME UNKNOWN QUANTITY, PLUS FIVE. UNDERSTANDING HOW TO EVALUATE THESE EXPRESSIONS FOR GIVEN VALUES OF THE VARIABLES IS A FUNDAMENTAL STEP. THIS INVOLVES CAREFUL SUBSTITUTION AND ADHERENCE TO THE ORDER OF OPERATIONS (PEMDAS/BODMAS).

EXPONENTS AND RADICALS: SIMPLIFYING AND MANIPULATING

EXPONENTS PROVIDE A CONCISE WAY TO REPRESENT REPEATED MULTIPLICATION. RULES OF EXPONENTS, SUCH AS THE PRODUCT RULE, QUOTIENT RULE, AND POWER RULE, ARE ESSENTIAL FOR SIMPLIFYING EXPRESSIONS INVOLVING POWERS. FOR INSTANCE, $x^a x^b = x^{(a+b)}$. RADICALS, ON THE OTHER HAND, REPRESENT ROOTS, SUCH AS SQUARE ROOTS OR CUBE ROOTS. SIMPLIFYING RADICAL EXPRESSIONS OFTEN INVOLVES FINDING PERFECT SQUARES OR CUBES WITHIN THE RADICAND OR RATIONALIZING THE DENOMINATOR TO ELIMINATE RADICALS FROM THE DENOMINATOR. A FIRM GRASP OF THESE RULES ALLOWS FOR EFFICIENT MANIPULATION OF ALGEBRAIC TERMS.

MASTERING EQUATIONS AND INEQUALITIES

EQUATIONS AND INEQUALITIES ARE THE BACKBONE OF PROBLEM-SOLVING IN ALGEBRA. THEY ALLOW US TO FIND UNKNOWN VALUES AND DEFINE RANGES OF POSSIBLE SOLUTIONS. COLLEGE ALGEBRA DELVES INTO VARIOUS TYPES OF EQUATIONS AND INEQUALITIES, REQUIRING STUDENTS TO DEVELOP SYSTEMATIC APPROACHES FOR SOLVING THEM. THE GOAL IS OFTEN TO ISOLATE THE VARIABLE OR VARIABLES TO DETERMINE THEIR SPECIFIC VALUES OR THE RANGE OF VALUES THAT SATISFY THE GIVEN CONDITION.

SOLVING LINEAR EQUATIONS: THE FIRST STEP

LINEAR EQUATIONS ARE EQUATIONS WHERE THE HIGHEST POWER OF THE VARIABLE IS ONE. THEY ARE TYPICALLY IN THE FORM $ax + b = c$. SOLVING THESE INVOLVES A SERIES OF INVERSE OPERATIONS TO ISOLATE THE VARIABLE. FOR EXAMPLE, TO SOLVE $3x - 5 = 10$, ONE WOULD FIRST ADD 5 TO BOTH SIDES TO GET $3x = 15$, AND THEN DIVIDE BOTH SIDES BY 3 TO FIND $x = 5$. UNDERSTANDING THE PRINCIPLE OF PERFORMING THE SAME OPERATION ON BOTH SIDES OF THE EQUATION TO MAINTAIN EQUALITY IS CRITICAL.

QUADRATIC EQUATIONS: A DEEPER DIVE

QUADRATIC EQUATIONS ARE EQUATIONS OF THE FORM $ax^2 + bx + c = 0$, WHERE a IS NOT ZERO. THESE EQUATIONS CAN HAVE ZERO, ONE, OR TWO REAL SOLUTIONS. COMMON METHODS FOR SOLVING QUADRATIC EQUATIONS INCLUDE FACTORING, COMPLETING THE SQUARE, AND THE QUADRATIC FORMULA. THE QUADRATIC FORMULA, $x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$, IS A UNIVERSAL METHOD THAT CAN SOLVE ANY QUADRATIC EQUATION. THE DISCRIMINANT ($b^2 - 4ac$) IS PARTICULARLY IMPORTANT AS IT TELLS US THE NATURE OF THE ROOTS (REAL OR COMPLEX, DISTINCT OR REPEATED).

INEQUALITIES: UNDERSTANDING RANGES AND SETS

INEQUALITIES, SUCH AS $x > 5$ OR $2x + 1 \leq 11$, DESCRIBE RELATIONSHIPS WHERE VALUES ARE NOT NECESSARILY EQUAL BUT ARE GREATER THAN, LESS THAN, GREATER THAN OR EQUAL TO, OR LESS THAN OR EQUAL TO EACH OTHER. SOLVING INEQUALITIES OFTEN INVOLVES SIMILAR STEPS TO SOLVING EQUATIONS, WITH ONE CRUCIAL DIFFERENCE: MULTIPLYING OR DIVIDING BOTH SIDES BY A NEGATIVE NUMBER REVERSES THE INEQUALITY SIGN. THE SOLUTION TO AN INEQUALITY IS TYPICALLY A RANGE OF VALUES, OFTEN REPRESENTED ON A NUMBER LINE.

EXPLORING FUNCTIONS AND THEIR PROPERTIES

FUNCTIONS ARE FUNDAMENTAL CONCEPTS IN MATHEMATICS, DESCRIBING RELATIONSHIPS WHERE EACH INPUT HAS EXACTLY ONE OUTPUT. COLLEGE ALGEBRA EXPLORES VARIOUS TYPES OF FUNCTIONS, THEIR GRAPHICAL REPRESENTATIONS, AND THEIR KEY PROPERTIES. UNDERSTANDING FUNCTIONS IS ESSENTIAL FOR MODELING REAL-WORLD PHENOMENA AND ANALYZING RELATIONSHIPS BETWEEN VARIABLES.

WHAT IS A FUNCTION? DEFINITION AND NOTATION

A FUNCTION CAN BE DEFINED AS A RULE THAT ASSIGNS TO EACH ELEMENT IN A SET CALLED THE DOMAIN, EXACTLY ONE ELEMENT IN A SET CALLED THE RANGE. FUNCTION NOTATION, SUCH AS $f(x)$, IS USED TO REPRESENT THE OUTPUT OF A FUNCTION FOR A GIVEN INPUT x . FOR INSTANCE, IF $f(x) = 2x + 3$, THEN $f(5) = 2(5) + 3 = 13$. THE VERTICAL LINE TEST IS A GRAPHICAL METHOD USED TO DETERMINE IF A RELATION IS A FUNCTION: IF ANY VERTICAL LINE INTERSECTS THE GRAPH MORE THAN ONCE, IT IS NOT A FUNCTION.

GRAPHING FUNCTIONS: VISUALIZING RELATIONSHIPS

THE GRAPH OF A FUNCTION PROVIDES A VISUAL REPRESENTATION OF ITS BEHAVIOR. UNDERSTANDING HOW TO PLOT POINTS, IDENTIFY INTERCEPTS (X-INTERCEPTS AND Y-INTERCEPTS), AND INTERPRET THE SHAPE OF THE GRAPH IS CRUCIAL. DIFFERENT TYPES OF FUNCTIONS HAVE CHARACTERISTIC GRAPH SHAPES, SUCH AS THE STRAIGHT LINE FOR LINEAR FUNCTIONS, THE PARABOLA FOR QUADRATIC FUNCTIONS, AND CURVES FOR EXPONENTIAL OR LOGARITHMIC FUNCTIONS. KEY FEATURES LIKE SYMMETRY AND ASYMPTOTES PROVIDE FURTHER INSIGHT INTO THE FUNCTION'S BEHAVIOR.

TRANSFORMATIONS OF FUNCTIONS: SHIFTING, STRETCHING, AND REFLECTING

UNDERSTANDING HOW BASIC FUNCTION GRAPHS ARE TRANSFORMED BY CHANGES IN THEIR EQUATIONS IS A POWERFUL TOOL. VERTICAL SHIFTS INVOLVE ADDING OR SUBTRACTING A CONSTANT TO THE FUNCTION'S OUTPUT (E.G., $f(x) + k$), HORIZONTAL SHIFTS INVOLVE ADDING OR SUBTRACTING A CONSTANT TO THE INPUT (E.G., $f(x - h)$), VERTICAL STRETCHES OR COMPRESSIONS INVOLVE MULTIPLYING THE FUNCTION'S OUTPUT BY A CONSTANT (E.G., $af(x)$), AND REFLECTIONS INVOLVE MULTIPLYING BY -1 (E.G., $-f(x)$ OR $f(-x)$).

DELVING INTO POLYNOMIALS AND RATIONAL FUNCTIONS

POLYNOMIALS AND RATIONAL FUNCTIONS ARE SIGNIFICANT CLASSES OF FUNCTIONS STUDIED IN COLLEGE ALGEBRA. THEY APPEAR IN MANY APPLICATIONS AND HAVE DISTINCT PROPERTIES THAT ARE IMPORTANT TO UNDERSTAND FOR FURTHER MATHEMATICAL STUDY.

POLYNOMIAL FUNCTIONS: STRUCTURE AND BEHAVIOR

POLYNOMIALS ARE EXPRESSIONS CONSISTING OF VARIABLES AND COEFFICIENTS, INVOLVING ONLY NON-NEGATIVE INTEGER EXPONENTS OF VARIABLES. FOR EXAMPLE, $P(x) = 3x^4 - 2x^2 + x - 7$ IS A POLYNOMIAL. THE DEGREE OF A POLYNOMIAL IS THE HIGHEST EXPONENT OF THE VARIABLE. THE BEHAVIOR OF POLYNOMIAL GRAPHS, PARTICULARLY END BEHAVIOR (HOW THE GRAPH BEHAVES AS x APPROACHES POSITIVE OR NEGATIVE INFINITY), IS DETERMINED BY THE LEADING TERM (THE TERM WITH THE HIGHEST DEGREE).

OPERATIONS ON POLYNOMIALS: ADDITION, SUBTRACTION, AND MULTIPLICATION

ADDING AND SUBTRACTING POLYNOMIALS INVOLVES COMBINING LIKE TERMS. MULTIPLYING POLYNOMIALS TYPICALLY USES THE DISTRIBUTIVE PROPERTY OR A TABULAR METHOD. FACTORING POLYNOMIALS, OR EXPRESSING THEM AS A PRODUCT OF SIMPLER POLYNOMIALS, IS A CRUCIAL SKILL FOR SOLVING POLYNOMIAL EQUATIONS AND UNDERSTANDING THEIR ROOTS. TECHNIQUES INCLUDE FACTORING OUT COMMON FACTORS, DIFFERENCE OF SQUARES, SUM AND DIFFERENCE OF CUBES, AND GROUPING.

RATIONAL FUNCTIONS: RATIOS OF POLYNOMIALS

RATIONAL FUNCTIONS ARE FUNCTIONS THAT CAN BE EXPRESSED AS THE RATIO OF TWO POLYNOMIALS, $R(x) = P(x) / Q(x)$, WHERE $Q(x)$ IS NOT THE ZERO POLYNOMIAL. KEY FEATURES OF RATIONAL FUNCTIONS INCLUDE VERTICAL ASYMPTOTES (WHERE THE DENOMINATOR IS ZERO AND THE NUMERATOR IS NON-ZERO), HORIZONTAL OR SLANT ASYMPTOTES (DESCRIBING THE END BEHAVIOR), AND HOLES (REMOVABLE DISCONTINUITIES WHERE BOTH THE NUMERATOR AND DENOMINATOR ARE ZERO).

UNPACKING EXPONENTIAL AND LOGARITHMIC RELATIONSHIPS

EXPONENTIAL AND LOGARITHMIC FUNCTIONS ARE INVERSE FUNCTIONS THAT MODEL GROWTH AND DECAY PROCESSES. THEY ARE

FUNDAMENTAL IN AREAS LIKE FINANCE, SCIENCE, AND ENGINEERING.

EXPONENTIAL FUNCTIONS: MODELING GROWTH AND DECAY

EXPONENTIAL FUNCTIONS ARE OF THE FORM $f(x) = a^x$, WHERE 'A' IS THE BASE AND IS GREATER THAN 0 AND NOT EQUAL TO 1. THESE FUNCTIONS EXHIBIT RAPID GROWTH OR DECAY DEPENDING ON THE VALUE OF 'A'. THE NATURAL EXPONENTIAL FUNCTION, $f(x) = e^x$, WHERE 'E' IS EULER'S NUMBER (APPROXIMATELY 2.71828), IS PARTICULARLY IMPORTANT. EXPONENTIAL FUNCTIONS ARE USED TO MODEL POPULATION GROWTH, COMPOUND INTEREST, AND RADIOACTIVE DECAY.

LOGARITHMIC FUNCTIONS: THE INVERSE OF EXPONENTIAL

LOGARITHMIC FUNCTIONS ARE THE INVERSE OF EXPONENTIAL FUNCTIONS. IF $y = a^x$, THEN $x = \log_a(y)$. THE BASE OF THE LOGARITHM IS 'A'. COMMON LOGARITHMS HAVE A BASE OF 10 ($\log$ OR $\log_{10}$), AND NATURAL LOGARITHMS HAVE A BASE OF 'E' ($\ln$). PROPERTIES OF LOGARITHMS, SUCH AS THE PRODUCT RULE, QUOTIENT RULE, AND POWER RULE, ARE ESSENTIAL FOR SOLVING LOGARITHMIC EQUATIONS AND SIMPLIFYING EXPRESSIONS. THESE PROPERTIES MIRROR THE RULES OF EXPONENTS.

TACKLING SYSTEMS OF EQUATIONS AND MATRICES

SYSTEMS OF EQUATIONS INVOLVE MULTIPLE EQUATIONS WITH MULTIPLE VARIABLES, REQUIRING METHODS TO FIND SOLUTIONS THAT SATISFY ALL EQUATIONS SIMULTANEOUSLY. MATRICES PROVIDE A POWERFUL TOOL FOR ORGANIZING AND SOLVING THESE SYSTEMS.

SOLVING SYSTEMS OF LINEAR EQUATIONS

METHODS FOR SOLVING SYSTEMS OF LINEAR EQUATIONS INCLUDE SUBSTITUTION, ELIMINATION, AND GRAPHICAL METHODS. FOR SYSTEMS WITH MORE THAN TWO VARIABLES, THESE METHODS CAN BECOME CUMBERSOME. THE NUMBER OF SOLUTIONS CAN BE ONE, NONE, OR INFINITELY MANY, DEPENDING ON THE RELATIONSHIPS BETWEEN THE EQUATIONS.

INTRODUCTION TO MATRICES: ORGANIZING DATA

MATRICES ARE RECTANGULAR ARRAYS OF NUMBERS. THEY ARE PARTICULARLY USEFUL FOR REPRESENTING COEFFICIENTS OF VARIABLES IN SYSTEMS OF EQUATIONS. MATRIX OPERATIONS LIKE ADDITION, SUBTRACTION, AND MULTIPLICATION HAVE SPECIFIC RULES. THE DETERMINANT OF A MATRIX IS A SCALAR VALUE THAT PROVIDES INFORMATION ABOUT THE MATRIX AND THE SYSTEM OF EQUATIONS IT REPRESENTS.

MATRIX METHODS FOR SOLVING SYSTEMS: GAUSSIAN ELIMINATION AND CRAMER'S RULE

GAUSSIAN ELIMINATION IS A SYSTEMATIC PROCESS OF USING ROW OPERATIONS TO TRANSFORM A MATRIX INTO ROW-ECHELON FORM, WHICH SIMPLIFIES SOLVING THE CORRESPONDING SYSTEM OF EQUATIONS. CRAMER'S RULE USES DETERMINANTS TO SOLVE SYSTEMS OF LINEAR EQUATIONS, THOUGH IT IS GENERALLY MORE COMPUTATIONALLY INTENSIVE FOR LARGER SYSTEMS COMPARED TO GAUSSIAN ELIMINATION.

KEY STRATEGIES FOR COLLEGE ALGEBRA SUCCESS

BEYOND UNDERSTANDING THE CORE CONCEPTS, ADOPTING EFFECTIVE STUDY STRATEGIES IS CRUCIAL FOR ACHIEVING SUCCESS IN COLLEGE ALGEBRA. THESE STRATEGIES FOCUS ON ACTIVE LEARNING, CONSISTENT PRACTICE, AND SEEKING HELP WHEN NEEDED.

- **CONSISTENT PRACTICE:** REGULARLY WORKING THROUGH PROBLEMS IS THE MOST EFFECTIVE WAY TO SOLIDIFY UNDERSTANDING AND BUILD SPEED AND ACCURACY.
- **ACTIVE LEARNING:** DON'T JUST PASSIVELY READ; ENGAGE WITH THE MATERIAL BY WORKING EXAMPLES, EXPLAINING CONCEPTS TO OTHERS, AND TRYING TO DERIVE FORMULAS.
- **UTILIZE RESOURCES:** TAKE ADVANTAGE OF YOUR TEXTBOOK, ONLINE TUTORIALS, STUDY GROUPS, AND YOUR INSTRUCTOR'S OFFICE HOURS.
- **UNDERSTAND THE 'WHY':** STRIVE TO UNDERSTAND THE REASONING BEHIND THE FORMULAS AND METHODS, NOT JUST MEMORIZE THEM. THIS FOSTERS DEEPER COMPREHENSION.
- **REVIEW REGULARLY:** DON'T WAIT UNTIL THE EXAM TO REVIEW. REGULARLY REVISIT PAST TOPICS TO REINFORCE YOUR KNOWLEDGE.

FAQ

Q: WHAT ARE THE MOST COMMON PITFALLS STUDENTS FACE IN COLLEGE ALGEBRA?

A: COMMON PITFALLS INCLUDE A WEAK FOUNDATION IN BASIC ARITHMETIC AND PRE-ALGEBRA SKILLS, NOT PRACTICING CONSISTENTLY, AND TRYING TO MEMORIZE FORMULAS WITHOUT UNDERSTANDING THEIR UNDERLYING PRINCIPLES. STUDENTS ALSO SOMETIMES STRUGGLE WITH THE ABSTRACT NATURE OF FUNCTIONS AND THE PRECISE LANGUAGE OF MATHEMATICAL PROOFS.

Q: HOW CAN I EFFECTIVELY PREPARE FOR A COLLEGE ALGEBRA EXAM?

A: EFFECTIVE EXAM PREPARATION INVOLVES REVIEWING ALL LECTURE NOTES AND TEXTBOOK CHAPTERS, WORKING THROUGH PRACTICE PROBLEMS FROM THE TEXTBOOK AND ANY PROVIDED STUDY GUIDES, AND DOING MOCK EXAMS UNDER TIMED CONDITIONS. FOCUS ON UNDERSTANDING THE TYPES OF PROBLEMS YOU STRUGGLE WITH AND DEDICATE EXTRA TIME TO THOSE AREAS.

Q: WHAT IS THE ROLE OF GRAPHING IN COLLEGE ALGEBRA?

A: GRAPHING IS ESSENTIAL FOR VISUALIZING MATHEMATICAL RELATIONSHIPS, UNDERSTANDING THE BEHAVIOR OF FUNCTIONS, AND INTERPRETING SOLUTIONS TO EQUATIONS AND INEQUALITIES. IT PROVIDES AN INTUITIVE WAY TO GRASP ABSTRACT CONCEPTS AND IS A KEY TOOL FOR PROBLEM-SOLVING.

Q: HOW DOES COLLEGE ALGEBRA DIFFER FROM HIGH SCHOOL ALGEBRA?

A: COLLEGE ALGEBRA TYPICALLY DELVES DEEPER INTO THEORETICAL CONCEPTS, INTRODUCES MORE ABSTRACT FUNCTIONS AND THEIR PROPERTIES, AND OFTEN INCLUDES TOPICS LIKE MATRICES, SEQUENCES, AND SERIES. THE PACE IS GENERALLY FASTER, AND THE EXPECTATION FOR INDEPENDENT LEARNING AND PROBLEM-SOLVING IS HIGHER.

Q: IS IT POSSIBLE TO SUCCEED IN COLLEGE ALGEBRA WITHOUT A STRONG APTITUDE FOR MATH?

A: YES, ABSOLUTELY. WHILE SOME INDIVIDUALS MAY FIND IT EASIER, SUCCESS IN COLLEGE ALGEBRA IS PRIMARILY A RESULT OF CONSISTENT EFFORT, EFFECTIVE STUDY STRATEGIES, AND A WILLINGNESS TO SEEK HELP. DEDICATION AND SMART PRACTICE ARE

MORE IMPORTANT THAN INNATE "APTITUDE."

Q: WHAT ARE THE KEY DIFFERENCES BETWEEN LINEAR AND QUADRATIC EQUATIONS?

A: LINEAR EQUATIONS HAVE VARIABLES RAISED TO THE POWER OF ONE AND THEIR GRAPHS ARE STRAIGHT LINES. QUADRATIC EQUATIONS INVOLVE VARIABLES RAISED TO THE POWER OF TWO, AND THEIR GRAPHS ARE PARABOLAS. QUADRATIC EQUATIONS CAN HAVE UP TO TWO SOLUTIONS, WHILE LINEAR EQUATIONS TYPICALLY HAVE ONE.

Q: WHY ARE LOGARITHMS IMPORTANT IN COLLEGE ALGEBRA AND BEYOND?

A: LOGARITHMS ARE CRUCIAL BECAUSE THEY ARE THE INVERSE OF EXPONENTIAL FUNCTIONS, ALLOWING US TO SOLVE FOR EXPONENTS. THEY ARE FUNDAMENTAL IN MODELING PHENOMENA THAT INVOLVE GROWTH OR DECAY AT A RATE PROPORTIONAL TO THEIR CURRENT SIZE, SUCH AS POPULATION GROWTH, COMPOUND INTEREST, AND SCIENTIFIC DECAY PROCESSES.
